

# Basic Exploration of Numeric Data Organized by 1 or 2 Groups

Data loaded  
into R  
workspace

Data is comprised  
of a 1 group

(i.e., size of steelhead  
in Lake Erie, students  
in 1 class)

Data is comprised of  
a 2+ groups

(i.e., size of steelhead AND  
pike in Lake Erie)

Visualize Raw Data

Histogram  
`hist()`

Boxplot  
`boxplot()`

Summary Stats

`mean()`  
`sd()`  
`summary()`  
`min()`

`median()`  
`var()`  
`range()`  
`max()`

Visualize Raw Data

Boxplot  
`boxplot()`

Visualize Data split  
by group

Subset/split data  
`subset()`

2 Histograms  
`par(); hist()`

Summarize by group

`tapply(..., FUN = a  
summary function)`

Summary Stats By Group

`mean()`  
`sd()`  
`summary()`  
`min()`

`median()`  
`var()`  
`range()`  
`max()`
